

Letter Of Recommendation

I am delighted to recommend Priya Patel for her higher studies in (program name) at (University name). I have taught her the subjects of CPP, Data Structures and Compiler, and recognize her as an excellent team player who possesses sound communication skills and has a keen interest in academics.

She is determined to be an academically brilliant student and throughout her undergraduate studies scored top grades quite consistently. Her understanding of the fundamentals is exceptional, especially of the subjects that I taught her, and she is equally competent at applying these concepts in practically complex experiments. In lectures, she raised relevant queries, seemed eager to upgrade her existing knowledge, and did not confine her learning to what is being discussed in class, regularly enrolled in extra courses. Her active participation in diverse academic activities was remarkable and at the same time, she was extremely serious about all her commitments and was meticulous in her execution. Additionally, she significantly stood out in regards to her indomitable time management skills as he was capable of delivering multiple tasks easily within the deadline and had done so without making any compromise on the quality of the deliverable.

Under my guidance, she learned to create algorithms with the least time complexity for the compiles and graphics and completed her minor project on the mobile comparator. For this project, she used SQL database, built web software in java, and was involved in all the phases of the project. Working on the project, her lab work was comprehensive, and diligently following the guidelines she eventually took the project forward as expected. Overall, she was impressive with her constant improvisation and contributed significantly by speeding up the project activities through efficient strategies.

Priya is enthusiastic about her participation in extra-curricular activities too, has attended many workshops, including a workshop to create 3D holograms, and subsequently conducted a presentation on holograms. She has also represented the college in an international Baja event as the web designer for the racing team and was among the top two performers in a business presentation competition.

On strength of her talent and desire to learn, I believe Priya is ready to pursue this master's course, have confidence in her capabilities, and am pretty sure that she will successfully learn all the skills taught within the structure of this course. I, therefore, recommend her to your institution without any reservations.
