

Letter Of Recommendation

I am writing in support of Ms. Sneha Kapoor's application for a Master's program from your esteemed university. I have known her since (mention year) instructed her in the subjects of Cloud Computing, and Networking. Based on my observations, my opinion of her is of an academic brilliant student who has been always punctual and is an avid learner.

She takes a keen interest in exploring the subject and does not mind learning beyond the prescribed curriculum. Taking the initiative to keep herself abreast and adept at the latest in the field of her interest she was quick in learning cloud computing and successfully cleared PQR Certified Network Associate, and XYZ Web Services global examinations. She further complements her quest for learning by displaying the creativity needed to utilize in-depth conceptual knowledge for drawing meaningful insights as per the requirement. An academically strong student, she is approachable too and enjoys a good reputation of being a polite and respectful person amongst her peers and faculty. Given her interpersonal skill and helpful nature, I am sure that she has the leadership potential and in the future can establish herself as an inspirational leader who can manage both projects as well as her team efficiently.

I have also mentored her on a project to develop an e-learning platform for underprivileged students using Cloud Computing. Her major responsibilities in this project included the creation of scalable servers for deployment and implementation of a cryptographic algorithm, MVP live streaming, and AWS services such as LAMBDA, EBS, Cloudfront, and S3. During this project, I was pleased to witness her comprehensive lab work, agile conduct and particularly impressed with her proficient application of theoretical learning for obtaining practical outcomes of relevance with ease. Despite her active involvement in a plethora of academic activities, she enthusiastically participated in extra-curricular and co-curricular activities as well, was part of blind coding challenges and hackathons and on many occasions was awarded first prize. Moreover, she regularly volunteered for presentations in the class, especially on novel topics, and impressed everyone with her sound acumen, convincing presentation style, and concise yet effective explanation of the topic.

I think a Master's program from a prestigious University is exactly what Sneha needs to live up to her potential. She nurtures the capabilities and the skill-set, which is a pre-requisite for this course, and this coursework will further add another dimension to her professional career. Hence, I strongly support her decision and am happy to recommend her.
