

Letter Of Recommendation

I am pleased to write this letter of recommendation for Ms. Simran Patel whom I have known since (Month, Year – e.g. July 2020). I have taught her the subjects of Object-oriented programming and Design, Design and Analysis of Algorithms and Data Mining and Analysis and found her to be an assiduous student, who has an impressive academic record and is meticulous.

She is dedicated to her assigned task and works with equal zeal whether it is a major project or an assignment related to an elective subject. Her performance in multiple academic activities has been excellent and at times produced results so astounding that I have even shared her work with the entire class for others to learn from it. As a student, she is serious about securing top grades in academics and regularly achieved this goal in all the subjects that I have instructed her in. She follows a proactive approach to learning and glimpse of her awareness around the latest disruptions within the education space was conspicuous when the lectures were arranged online due to covid restrictions. Just like academics, she is fully involved in extra-curricular activities too, has participated in various technical events (Research Day 2021) held at college and was part of the team winning the best all-girls team award at HACK2021 organized by XYZ.

I have mentored her on many projects, which were mostly based on Machine Learning and Deep Learning and few of the notable assignments include buddy pair system (a project to predict and validate the efficiency of buddy pair system in students education), Gamification Based Recommender System for Up-skilling (included developing a game through for students to learn new concepts and an AI recommendation system to suggest them relevant courses) and Student as a Stakeholder (assessing if students prefer online or offline mode of learning, considering them as stakeholders using Convolutional neural network with a huge authentic dataset). In all these projects, she facilitated team work and acting as a true team player assisted in completion of all the tasks well within the time. Furthermore, she explored beyond responsibilities if needed, utilized her leadership experience well and owing to her advance domain knowledge proved to be a reliable resource for complex assignments.

I believe this course will help Simran in enhancing her academic adeptness and I am pretty sure it would develop her into an astute professional. I therefore recommend her application.
