

Letter Of Recommendation

It makes me extremely happy to write this recommendation letter in support of Ms. Khushi Saxena. She is acquainted with me through our academic interactions at ABC College of Engineering and was under my tutelage for the subjects of Environmental Engineering 1 and Transportation Engineering 2. In our association of all these years, she came across as an inquisitive individual and looked fervent to expand her knowledge base.

She has an analytical bent of mind and eagerness to proactively learn new things. Her understanding of the fundamentals is exceptional, and her approach towards learning reveals her capability to visualize novel techniques and advancement positively. She possesses a strong desire to do well in academics and has always scored excellent grades in the subjects that I taught her. She never misses any theory lecture or practical session and patiently listens to absorb the crux of what is being discussed in the class. Her attentiveness is evident from the interesting queries which she raises frequently and often involves in constructive discussions with me to resolve her doubts. A reliable person to handle critical tasks, she can adapt to work requirements and is always eager to volunteer for new project opportunities.

In practical sessions, she is always expeditious and meticulous with her responsibilities and works diligently towards timely completing all assigned tasks. I also found her lab work impressive as she exhibited the ability to apply learned principles precisely and made sincere efforts in ensuring that all the guidelines shared were followed during the experiments. Just like academics, Khushi is extremely conscious about participating in extra-curricular activities and her performance in these activities is a mirror image of her excellent performance in various academic activities. She has participated in various technical and cultural events and was part of almost all the events organized at the college level. In addition to participation, she has also been involved in organizing these events and served at different positions within multiple student bodies. She was the joint lady representative of the college in the academic year (mention year) and also was the design head of the departmental festival.

I believe this course will assist Khushi in acquiring advanced-level learning and strengthening her skill-set would make her industry ready, and thereby enhance her career prospects. I, therefore, recommend her to your university.

Prashant Patel
Professor
ABC College of Engineering
