

### **Letter Of Recommendation**

I am pleased to recommend Mr. Siddhant Malhotra to the Master's program at your esteemed university. He is acquainted with me since (mention year) and was under my tutelage for the subjects of Data Structure, and Computer Graphics. As his professor, the impression I formed of him is that of a keen learner with clarity of technical concepts, and someone curious about the latest technical advent.

He is an inquisitive learner and not only does he possess the perseverance needed to obtain significant quantities of technical knowledge but also is focused on developing relevant skills to apply it proficiently. His passion for technology is unmatched and was vividly visible in his brilliant performances throughout his engineering program. Besides his superlative analytical abilities, his logical thinking further adds to his expertise in implementing logic-based applications and assists him in developing a rational approach towards resolving real-world scenarios pragmatically. In a gist, I would say that Siddhant is a capable and talented individual; has a brilliant numerical aptitude and I especially admire his methodical approach and in-depth analysis of the assigned task.

Under my guidance, he has completed a project related to RFID based automated trolley system in which he was also selected as the leader of the group. In this project, he executed all his tasks smartly and yet exhibited a strong work ethic. While working, he diligently paid attention to the entire mandate and impressed me with his efficient time management as he never missed any deadline and always delivered tasks timely. Performing as an inspirational leader, he led the group with amazing strategic thinking, was willing to include different opinions for decision making, and guided his team brilliantly. Furthermore, with his ability to interact confidently in a social setting and preference for the team's benefit, he has proved himself as a proficient team leader who can lead a team efficiently in any situation. Siddhant manages to maintain a fine balance between his academic projects and extra-curricular activities and regularly participates in various events at the college level. He has a special interest in technical events and also was awarded the Vikrant Singh top rank IT award.

I think this program will render him opportunity to practice modern techniques and have no doubt that he would be successful in consolidating valuable knowledge imparted through this well-structured course. Being in an international setting, he will gain insight into practical aspects of learned principles on a global stage and broaden his professional network. Hence, I affirm my recommendations for him.

Prof. Rajesh Verma  
HOD
