

Letter Of Recommendation

It is with pride that I am recommending Mr. Rajat Kumar for admittance in the (program name) at (university name). As the professor for the subject of Web Technology, I have known him through our academic interactions at ABC Institute of Computer Technology since third year of his engineering. Considering his affinity for performing well in academics, his high grades seem inevitable though however, this achievement is resultant of his undeterred dedication and I feel he also has requisite attitude and the willingness to learn and acquire in-depth subject knowledge.

He is passionate about exploring novel technologies shaping up the world order in the technical arena and with the view of expanding his knowledge regularly undertakes related experiments and projects. Being an avid learner, he is always ready to be a part of group activities leading to substantial knowledge sharing; never hesitates from raising his queries to clarify doubts and optimally utilizes his spare time by developing softwares. Consequently, he possesses sound understanding of various concepts such as OOPS, spring, Tomcat and JSP taught in the lectures and it is pleasing to witness him attending the sessions attentively despite having prior knowledge on the subject already.

I have also instructed him in the practical sessions and mentored him on a mini project to develop a powerful software system allowing users to print documents from their Android device or remote desktop/laptop without having used any direct wired connection to the printer. This was an end to end robust system, focused on automating the manual steps of printing documents and included a payment gateway for deducting charges before the document is sent to print. In this project, he exhibited strong technical know-how, excellent android development skills and particularly notable were his presentation skills. While presenting, he spoke with great poise, shared the finding objectively and communicating his ideas clearly to the audience, explained otherwise perplexing topics in a lucid manner. In addition to his academic commitments, he is conscious about participating in extra-curricular activities too, takes special interest in sporting activities and was part of college volleyball team which won many inter-college competitions. Furthermore, he has to his credit, an application "PICT Attendance" that he developed for assisting students checking their attendance.

After witnessing an astounding success rate that he has been able to maintain so far, I am sure Rajat would be able to enhance his academic adeptness via this course. I therefore, recommend him to the university wholeheartedly.

Krish Malhotra
Assistant Professor
ABC Institute of Computer Technology
