

### **Statement of Purpose**

One day in school when I was in class 6th, we had an inter-school competition for which we had to do a little bit of programming. After learning and practicing a lot in school, we finally won the competition. My teachers encouraged me further and subsequently, I went on with the same and won many awards and certificates for my school. However, when in class 10th we had to pick a stream, nothing came to my mind. Seeing my academics, my parents told me that I am good at everything but I must do what I love the most. I sat down and when I remembered all those years of my life, only one thing came to my mind which gave me images of joy, happiness, and satisfaction, i.e. computers. Hence I planned on building the foundation of my professional career with computers.

To begin my journey toward an influential career, the essential requirement was to find the best place to gain in-depth knowledge about my interests. And I discovered this in my bachelor's (Course name), which I recently completed from (College name). The curriculum was extensive and well-structured, allowing me to master a variety of subjects during my undergraduate studies, including (subjects). My course included both theoretical and practical components, and I was assigned to almost every aspect of computers and programming.

I began my internship with \_\_\_\_\_ for the duration of \_\_\_\_\_. I was able to put a lot of what I learned during my bachelor's degree to use. I learned about basic mail delivery protocols like SMTP, POP3, and IMAP during this internship. It also assisted me in gaining an understanding of the processes and tools (such as Static Code Analysis and Version Control) used in the industry to create robust software solutions. It taught me how to work in a team and how to be a responsible professional. This noticeable exposure also aided me in concluding that a master's degree will enhance my existing background in computer sciences. To strengthen my arsenal, I've decided to pursue a master's degree in computer sciences at your university.

The Netherlands is home to some of the world's best universities, which provide a modern approach to education, a vibrant student life, and a friendly environment. MSc Computer Sciences from the Netherlands will provide me with a wealth of experience. (University name) employs novel and innovative teaching methods. They place a strong emphasis on encouraging student collaboration through practical applications. The Netherlands is a very safe and friendly country. People are friendly and value individual liberty.

This master's course, I believe, will assist me in obtaining appropriate technical and analytical expertise that will assist me in becoming a successful Software Engineer. Because your university combines several

essential factors, such as highly experienced and excellent faculty and modern and advanced facilities, I believe it will be one of the best steps in my journey. I believe I have a particular interest in (subject name), which is exactly what this course module provides. As a hardworking student at your university, I hope to make a difference.
