

Statement of Purpose

The Visa Officer
Embassy of Poland
Sub: Application requesting a study permit
Respected Sir/ Madam,

I profoundly introduce myself as Dinesh Karthik, a former college passed out from Poland wishing to engage in further studies in a similar country due to its profound impact on my view of its educational quality. I have been chosen to pursue a **Master's in Business Engineering at Wroclaw University of Science and Technology**. My intake is September 2023, for which I am compelled to propose a visa statement of purpose. Through this, I wish to highlight my strong candidature for taking up this course in Poland and benefiting from the education standards I am already familiar with.

Academic and professional background

I completed a Diploma in Tools and Die-Making in 2015, and after that, I enrolled in a Bachelor of Technology in Automobile Engineering at National University in 2015. Having expanded my learning horizons in automobile engineering, I graduated in 2018. I had to utilize the theoretical exposure that I received during my college days to gain practical experience. Hence, I joined SRM Engineering Limited right after my graduation and worked here for a span of over one year in the role of Production Engineer. Here, I troubleshooted several production issues and coordinated logistics. As I have been a growth-oriented individual since childhood, I took a brilliant step to gain further education by pursuing an M.Sc in Global Production Engineering and Management, which directly corresponded to my previous work. Hence, I enrolled at Warsaw University of Technology in Poland in 2019. Having completed my master's degree opened doors of opportunity for me, and I could sustain a rewarding opportunity as a Business Analyst at Weassure Resource Private Limited in 2022. After having worked here for a year, I received an offer to work at Techninfo Labs as an Enterprise Analyst. Since March 2023, I have been working here, and I am deeply motivated to further my exposure to Business Engineering. India has a vast scope in business engineering, and professionals get paid hefty sums. I have witnessed people above my level who have a reputed degree in business engineering have immense value as professionals in this area. It also secures their future. Hence, I am highly motivated to pursue this course in an international setting.

Why Poland and not India?

Poland is well-known for its advanced education standards and richly diverse culture. I want to become a part of such an environment that promotes multiculturalism and gives equal weightage to its domestic and international students. My research about Poland culture ensures me about its warmth, peace, and harmony, which I am sure will augment my study exposure. Moreover, the financial implications of studying in Poland are quite affordable compared to English-speaking countries like the USA, the UK, or Australia. There are many more advantages to studying in Poland than studying in India. My country majorly focuses on a theoretical blend of study structure, while the study system in Poland encourages practical learning. I am more interested in the latter due to my already existing experience in the industry. Furthermore, the opportunity to gain international exposure is incognizant in my home

country, while the same is splendid in Poland. I am desperately seeking to pursue higher education in Poland so that I can gain the desired growth in my career back home, beating the odds of competition. Since I am also familiar with the education system in Poland, I am all the way more delighted to become part of the academia at my chosen university. I am sure that by studying here, I will also not face hardships as a foreign student as I am quite familiar with the intrinsic and extrinsic environment and know how to behave per the immigration laws in Poland.

Why Business Engineering at Wroclaw University of Science and Technology?

Intending to pursue further studies in business engineering, I researched all the prospects that could satisfy my learning objectives. In my opinion, I found studying at Wroclaw University of Science and Technology the best option for fast-tracking my growth back home. Indigenously, not many comprehensive courses are available in business engineering, while the available ones are either lengthy or distance learning oriented. Hence, I am more determined to further my education experiences at this university. Also, I considered many other Polish colleges, but the strength of the curriculum enticed me to attend only Wroclaw University. I am most interested in Data mining and artificial intelligence modules, for which I have taken a considerate step to choose further education. The institution's approach to offering applied lessons and access to industry-intensive training will come in handy as I return to India in the hope of playing my part as an efficient business engineer in the long run. Wroclaw University has a proven track record of successfully passing out students and unparalleled teachings. The faculty at this institution comes from a leading industry background that has motivated me to make my decision.

Reasons to Return to India

Family Ties

I belong to a very loving family which includes my parents, wife, and grandparents beside me. My Father is a government school teacher; hence, have a secure government job in India. Adding to this, my wife and mother are homemakers, while my grandmother resides at home due to old age. My familial ties are very strong, and I am proud to belong to such an educated. Since I am the only man in my family, I shoulder huge responsibilities towards my home and people. We have huge assets to look after, and as the heir of the family, my mother expects me to take over all the legal rights so I can nurture the heritage after her. Likewise, I have promising plans with my spouse, and we have decided to increase our family upon my return home. Once I settle down back to my work and personal life, we will plan our family further. Hence, I have no hidden intent to overstay in Poland, and I am sure to return home at any cost.

Future Goals

In the short term, my focus is on completing the Master of Science in Business Engineering program in Poland. Armed with a refined understanding of global business practices and innovative problem-solving techniques, my immediate goal is to return to India with a solid foundation in technology integration. Furthermore, my long-term aspiration is to establish and lead a pioneering startup in the dynamic fields of Data Science and Artificial Intelligence. This vision is fueled by a passion for utilizing cutting-edge technologies to address complex challenges and foster innovation. The startup will not only leverage global insights gained from international education but also serve as a platform to address specific challenges within the Indian context, contributing meaningfully to technology

advancement and the overall growth of the startup ecosystem in the country.

Financial establishment and ability to fund the education

My family is financially stable and has proven its financial sufficiency by assuring me to support my education endeavours. We have a total family income of 29 Lac Indian Rupees, a fixed deposit of 15 Lac Indian Rupees, and a Provident fund of 10 Lac Indian Rupees. Adding to this, we have a decent house and two pieces of land, along with a well-maintained car in Vellore. Please find enclosed my financial details for your kind perusal.

Travel history

I have studied in Poland from 2019 to 2022. From there, I completed a master of Science in Global Production Engineering and Management at Warsaw University of Technology. However, soon after the completion of my study program, I returned to my country to realize my career aspirations. I understand Poland's immigration rules, and I am well-versed in following them. I hold a clean visitor record, and I am determined to keep it clean in the future, too.

Conclusion

I hope my personal and professional records satisfy the requirements for filing a valid Polish study permit. Therefore, I request you allow me this favour and approve my visa grant. I shall be highly obliged.

Yours Sincerely,
Dinesh Karthik
